Ideal for display mura (nonuniformity) evaluation and inspection on smartphones and tablet PCs.

Accurately and easily measures the distribution of luminance and chromaticity.
XYZ filters provide high correlation with the spectral response of the human eye.

Instead of the RGB color-separation filters used by digital video cameras, etc., the CA-2500 uses XYZ filters that closely match the CIE 1931 color-matching functions to provide luminance and chromaticity measurements that have high correlation with the spectral response of the human eye.

Comprehensive factory calibration

Each lens is individually factory-calibrated at multiple focal points to correct for sensitivity variations due to the combination of sensor, optical filters, and the lens itself. By using the included calibration data, high-accuracy measurements of luminance and chromaticity distribution can be taken immediately after receiving the product without being restricted to a particular measurement method, subject size or subject brightness.

Even flickering light sources such as OLED televisions or PDP can be measured with good accuracy.

The synchronization frequency (4 to 2,000 Hz) of display devices and pulsed light sources can be input to enable synchronized measurements.

Expanded low-luminance measurement range

The minimum measurable luminance has been improved from 0.1 cd/m² to 0.05 cd/m².

Improved durability

Service life measurement cycles have been increased to approximately 5 times that of the CA-2000.

Interchangeable lenses for measurements of various subjects

Standard, wide-angle, and telephoto lenses (plus two macro rings for the telephoto lens) are available, enabling the optimum lens to be selected according to the particular subject, measurement area, or measurement method.
The small, lightweight body lets the CA-2500 be used in a wide variety of fields, such as display, illumination, automotive, aviation, and other industries.

**Includes advanced Data Management Software CA-S25w as standard accessory**
Advanced functions such as focus assist, positioning assist, and automatic measurement area extraction greatly simplify troublesome measurement preparations and data evaluation.

**Includes SDK (software development kit)**
The SDK can be used by customers to efficiently create their own software for controlling the CA-2500. SDK for Labview® also available.

**Applications**
- Simultaneous luminance/chromaticity distribution measurement of multiple small- or medium-sized LCD or organic EL panels
- Luminance/chromaticity measurement of single large-sized LCD or organic EL panels
- Display mura (unevenness) evaluation
- Luminance distribution measurements in illumination field
- Measurements of luminance/correlated color temperature distribution of various light-emitting subjects
- Luminance distribution measurements of automobile instrument panel meters
- Measurement of distribution of luminance and chromaticity on screen image from projectors

**Optional Mura Evaluation Software**
This optional software uses an exclusive algorithm to enable mura (unevenness) evaluation that more closely correlates with visual evaluation. (Details on later page.)

**Dimensions (Unit: mm)**

*When standard lens and lens hood are attached*
Data Management Software CA-S25w

The included software provides advanced functionality with simple operation to make the entire measurement process easier, from measurement preparations such as focusing and positioning through measurements of luminance and chromaticity distribution to evaluation of measurement results.

GUI assists with normal workflow

Easy-to-understand screens with easy-to-use tools
**Focus assist function**
Focus adjustment can be performed easily by viewing the cross-sectional slope of the luminance at the border between bright and dark areas.

When subject is not in focus

When subject is in focus

**Positioning assist function**
The positioning and orientation (tilt and twist) of the CA-2500 relative to the measurement subject can be easily checked while making fine adjustments, reducing the work and time required to achieve proper positioning and orientation.

**Automatic measurement area extraction function**
The light-emitting areas of measurement subjects can be automatically extracted and set as evaluation regions. This eliminates the need for manually defining and positioning evaluation regions, reducing the setup time required.

**Various data evaluation screens**

**Pseudocolor display**
Luminance and chromaticity distribution can be easily observed.

**Spot measurement**
The size and number of spots to be evaluated (indicated by black circles in the screen example above) can be freely defined by the user to enable multi-point measurement using the average values of each spot. Up to a maximum of 2500 spots can be defined.

**Chromaticity diagram display**
Variations in chromaticity can be displayed on the chromaticity diagram display.

**Multi-subject measurement capability**
Evaluation of the mura (unevenness) of multiple subjects can now be performed simultaneously. With the previous CA-S20w, the same tone gradation scale was used for all subjects; if subject luminances were very different, adjusting the scale to properly view one subject caused saturation of tones in evaluation areas for other subjects. But with CA-S25w, each evaluation area has its own tone gradation scale which can be individually adjusted according to the subject luminance. This allows the mura of multiple subjects with widely different luminances to be viewed simultaneously on the same screen.

**Other convenient functions**

**Data transfer to Excel®, etc.**
The desired range of data or spot values can be selected and transferred to Excel®, Word®, etc. via the clipboard. The various graphs and displays can also be copied and pasted, making it easy to create reports.

**Multiple exposure function**
By combining measurement data obtained using exposure times optimized for different luminance levels, subjects requiring a wide dynamic range (such as a gray scale) can be easily measured.

**CSV file import**
Measurement data can be stored in CSV format. The stored CSV-format data can then be imported and displayed in pseudocolor graphs, etc.

**User color gamut calibration**
User calibration can be performed for each color gamut of the measurement subject, improving chromaticity measurement accuracy when measuring subjects that use multiple colors, such as automobile instrument panels that use LEDs of various colors.

The new CA-S25w software can also be used with existing CA-2000 instruments. It provides vast improvements over the previous CA-S20w software, while also being able to read data measured and saved using CA-S20w. Visit our website to download the latest CA-S25w free of charge.
Quantification of luminance and chromaticity mura (unevenness) of various types of displays using 3 original index values: Luminance evaluation value, Color evaluation value, and Generic mura evaluation value

In the past, it has been difficult to quantitatively define the degree of mura of displays. Mura Evaluation Software CA-Mura processes the measurement data from the 2D Color Analyzer CA-2500 to provide mura values that closely correlate with the degree of mura determined by visual evaluation. The closer these values are to zero, the less mura exhibited by the display.

Mura Evaluation Software CA-Mura (Optional accessory)
Optional add-in software for Data Management Software CA-S25w

Algorithm
CA-Mura determines the luminance distribution and chromaticity distribution from the XYZ data measured by the 2D Color Analyzer, and applies the spatial characteristics of human vision. These data are then converted to the L*a*b* color space, and after edge and light/dark processing (for luminance mura) and high-chromaticity processing (for chromaticity mura), the Luminance evaluation value (LEV), Color evaluation value (CEV), and the Generic mura evaluation value (GMEV) based on LEV and CEV are calculated. Determination of these values is performed using the mura quantitative evaluation method developed by Sony Corporation.
System Diagram

Components other than those shown in the areas shaded are common for all packages.

* Each lens comes with a lens cap, mount cap, and calibration data DVD.

### Data Management Software CA-S25w

**System Requirements**

- **OS**
  - Windows® XP Professional SP3
  - Windows® XP Professional x64 Edition SP2
  - Windows® 7 Professional 32bit (x86)
  - Windows® 7 Professional 64bit (x64)
  - Windows® 8 Pro 32bit (x86)
  - Windows® 8 Pro 64bit (x64)
  - (English, Simplified Chinese, or Japanese)

- The hardware of the computer system to be used must meet or exceed the greater of the recommended system requirements for the compatible OS being used or the following specifications.

- **CPU** Pentium® 4 2.8 GHz equivalent or higher
- **Memory** 1,024 MB or more
- **Hard Disk**
  - Needs free space of at least 80 MB on system drive (where OS is installed)
  - In addition, each lens needs the following free spaces for installing calibration data.
    - For standard lens: approx. 540 MB
    - For wide lens: approx. 470 MB
    - For telephoto lens: approx. 1.3 GB
  - To save measurement data on hard disk, additional free space is required (approx. 110 MB for 10 measurement data)
  - Approx. 1 MB required for setting files containing spot settings, measurement condition settings, etc.
- **Display**
  - Display capable of at least 1,280 x 768 dots / 65,536 colors (High color, 16-bit)
- **Others**
  - Optical drive capable of reading CD-ROM (for installing software) and DVD-ROM (for installing calibration data) necessary.
  - USB port: For connecting measuring instrument

**Controllable instruments**: CA-2000; CA-2500

**Display language**: English, Simplified Chinese, or Japanese (Selectable at time of installation)

### Characteristics

- Standards: CIE 1931 standard observer
- Measurement units: Luminance: candela/m² (cd/m²), Chromaticity: Luv, Dominant wavelength, Excitation purity

### Cautions Regarding Temperature / Humidity Conditions for CA-2500

- It is recommended that the instrument be used and stored under standard conditions (Temperature: 23°C ±2°C; Relative humidity: 40%), and that areas subject to high temperature and/or humidity be avoided. In addition, in order to maintain the measurement accuracy or this instrument, it is recommended that it be inspected regularly about once a year. For details on having the instrument inspected, please contact the nearest Konica Minolta authorized service facility.
- Improper connection may cause a fire or electric shock. Always connect the instrument to the specified power supply voltage.
- Improper connection may cause a fire or electric shock. Always connect the instrument to the specified power supply voltage.

### SAFETY PRECAUTIONS

- For correct use and your safety, be sure to read the instruction manual before using the instrument.
- Always connect the instrument to the specified power supply voltage. Improper connection may cause a fire or electric shock.
