COLIBRI™ Colour Matching Software
Product line software and Services

KONICA MINOLTA

competent

COLIBRI™ – a unique modular colour-matching product line, which includes the heritage of over 40 years of experience in pigment applications and colour measurement, help users to boost both productivity and sales to improve profitability. Last but not least you are assured of support from the powerful and competent international network of Konica Minolta Sensing.

committed

We are committed to helping drive our customers' business performance by giving them a one-stop colour management solution that can be tailored to specific applications and can grow with changing needs. Our modular system caters for the entire spectrum of colour matching, correction, archiving, dispensing and quality control functions. Our experienced colour consultants carefully analyse your requirements in respect of applications and workflow in order to recommend the package that best suits your particular business. The on-screen

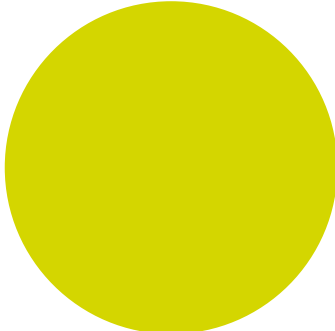

display of colours over specific substrates provides realistic visualisations which save both time and money. Optimised formulations make further cost savings by avoiding over pigmentation – also an important ecological consideration. Competent after sales service is guaranteed at the local level by a network of trained engineers throughout the world.

competitive

The unique multi flux algorithm of COLIBRI™ provides unmatched performance to match colour and opacity at the same time and thus outperforms traditional systems for non opaque samples such as Plastics, Coatings or Inks. The auxiliary binder function allows you to work with different binders using only one colorant database and thus greatly reduce preparation work. The template function permits selection of specific software features and screen layouts to guarantee seamless and fast handling. All functions

that are not required can be suppressed to make the software fit your workflow for greatly simplified operations. So whether you deal in paints, plastics, fibres, ceramics, coatings or inks, user-friendly COLIBRI™ is truly a matching software like no other!

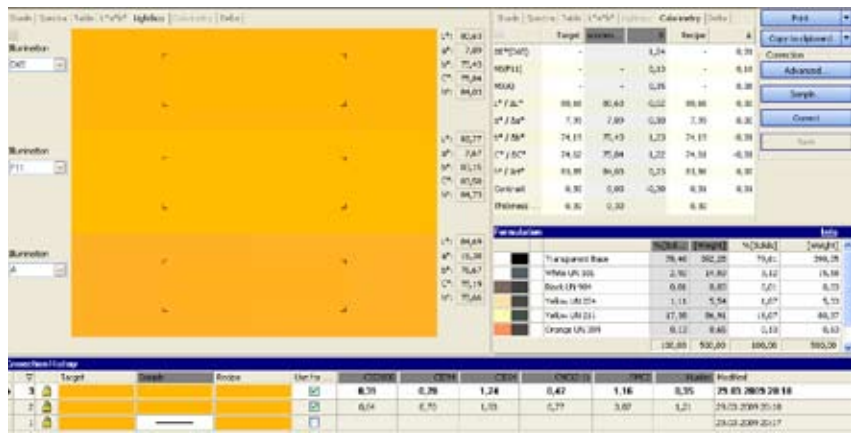

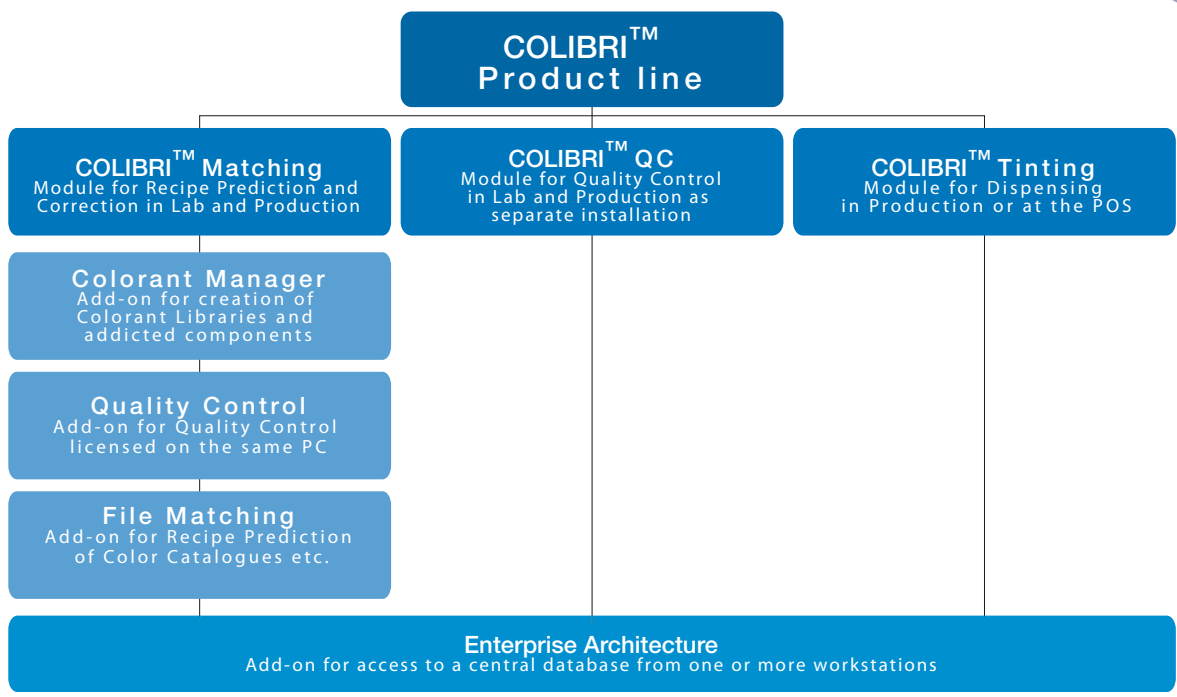

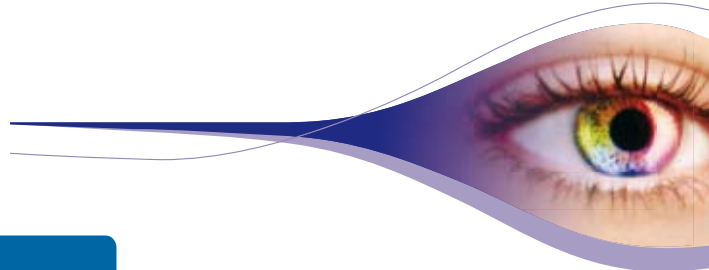

comprehensive

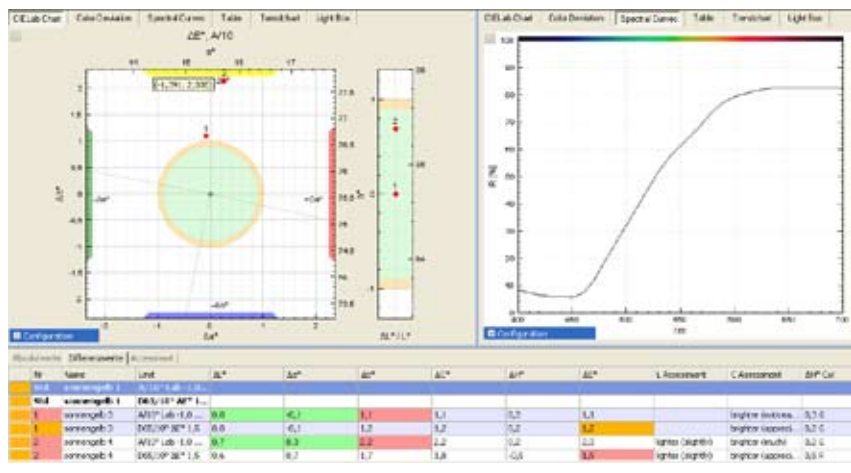

The COLIBRI™ product line comprises of a powerful range of modules and add-ons allowing you to configure the system to best fit your application. The base modules for matching and colorant management are complemented by a series of optional add-ons with supplementary features and further functions. Straightforward to install, maintain and update, with its attractive and intuitive user interface, COLIBRI™ offers fully customisable functionality and feature settings that can be adapted to your specific applications and workflow. The modular design enables you to tailor the system to your requirements as they change with your future growth. COLIBRI™ is optimised to work with all tabletop and portable spectrophotometers from Konica Minolta as well as drivers for many other instrument makers.

COLIBRI™ has full enterprise network capability with the ability to connect an unlimited number of users via the web sharing a central database and is also ready to connect to Enterprise Resource Planning (ERP) systems. Single sign-on option with advanced user management, access rights and permissions using existing enterprise IT management tools make it secure and compliant with IT infrastructure requirements.

Last but not least, an unprecedented local presence of specialists is on hand with help and support as and when required. We are happy to provide you with expert services at excellent value when you subscribe to our support and maintenance agreement.

Recipe correction screen with colour presentation of target, sample and prediction under 3 light sources for visualisation of metamerism and colour inconsistency.

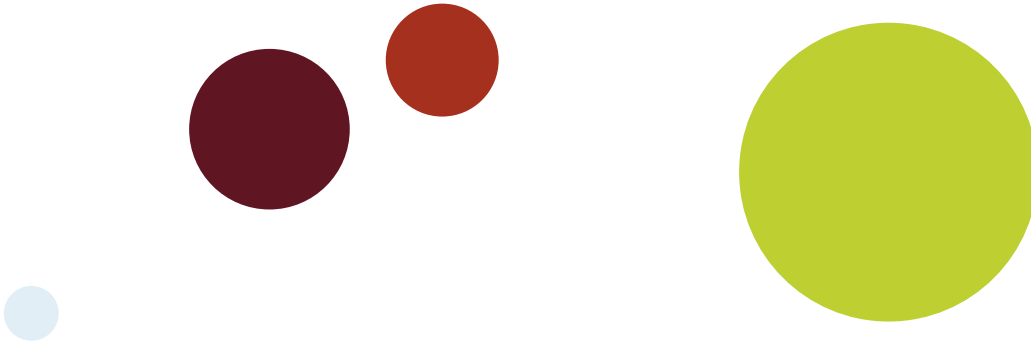

Quality Control screen with comprehensive table, including pass-fail visualisation for more than one tolerance, and with 6 switchable display options.
