Installation of U2SCX Emulation Driver

An account with rights to install new hardware is necessary to perform this procedure. Be sure that Windows 7 has been started in an Administrator account or other account having such rights.

- When a scanner or a tape device is connected, the U2SCX will be in emulation mode. If a mass storage device is connected, it will be recognized automatically with the Windows original driver.
- 1 Disconnect the PC from the network by disconnecting the network cable, etc. Next, connect the VIVID/VI to the U2SCX, switch on the power, and connect the U2SCX to the PC.
- 2 Click the "Start" button and then click "Control Panel".

3 Click "System and Security".

4 Click "Device Manager" in the "System" section.

5 In the "Other devices" category of the Device Manager dialog, right-click on "USB-SCSI Converter" and click on "Update Driver Software ..." in the pop-up menu that appears.
