## **0 INTRODUCTION**

This document describes the compatibility of the DICOM interface for Print Management System Printlink 5-IN with DICOM 3.0.

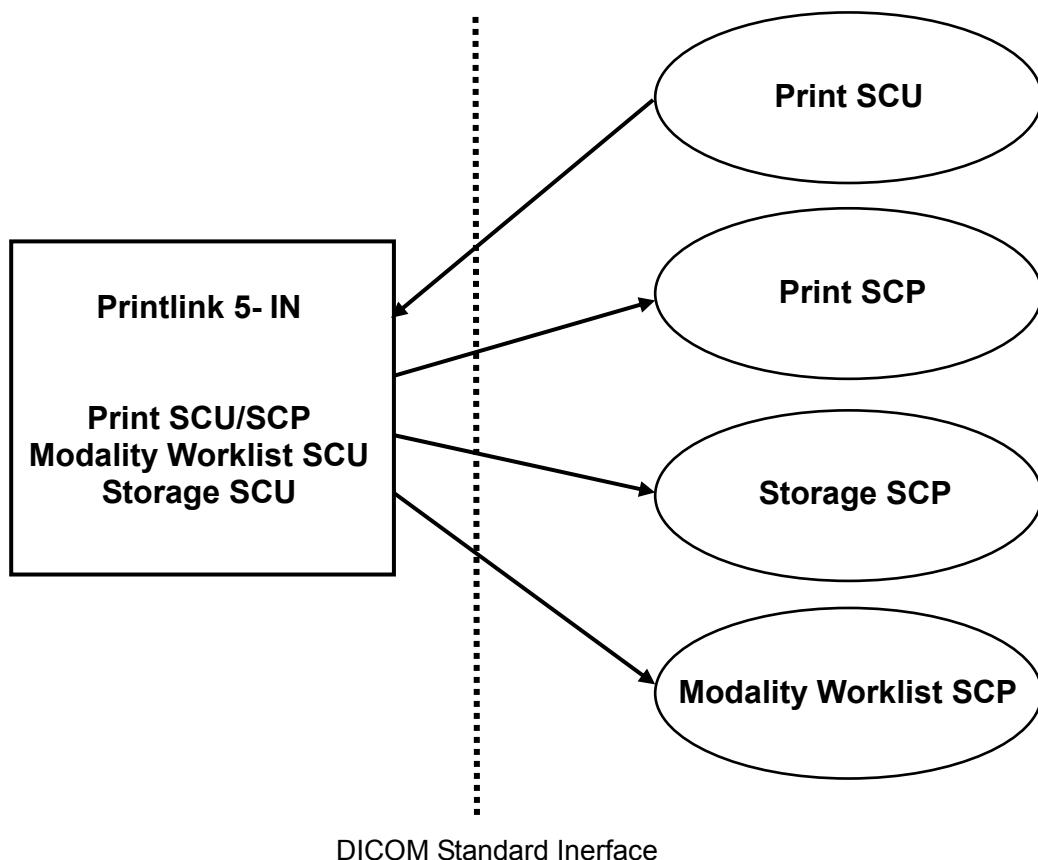

### **0.1 Abbreviations**

AE	DICOM Application Entity
IOD	DICOM Information Object Definition
PDU	Protocol Data Unit
SCU	DICOM Service Class User(client using this DICOM service)
SCP	DICOM Service Class Provider(server providing this service)
SOP	Service/Object Pair
UID	Unique Identifier

## **1 IMPLEMENTATION MODEL**

The DICOM interface for Print Management System Printlink 5-IN operates as a DICOM Print Service Class SCU/SCP, DICOM Storage Service Class SCU, and Modality Worklist Management Service Class SCU.

### **1.1 Application Data Flow Diagram**

## **1.2 Functional Definitions of AEs**

### **1.2.1 Print SCP**

When the Host (SCU) sends a request to Printlink 5-IN (SCP) to print an image, it operates the SOP class defined by the Print Management Service Class.

DIMSE service, which is defined in each SOP class, is used for operating the SOP class.

Printlink 5-IN (SCP) processes and makes hard copies of the image data according to the individual attribute values which were specified by the Host (SCU).

### **1.2.2 Print SCU**

When Printlink 5-IN (SCU) sends a request to the imager (SCP) to print an image, it operates the SOP class defined by the Print Management Service Class.

DIMSE service, which is defined in each SOP class, is used for operating the SOP class.

The imager (SCP) processes and makes hard copies of the image data according to the individual attribute values which were specified by the Printlink 5-IN (SCU).

### **1.2.3 Storage SCU**

The Storage SCU for Printlink 5-IN operates as a communication process and starts to send images in response to a C-STORE-RQ after a request to establish an association sent to an external AE is accepted.

### **1.2.4 Modality Worklist Management SCU**

The Modality Worklist Management SCU for Printlink 5-IN operates as a communication process and obtains patient / study data in response to a C-FIND-RQ after a request to establish an association sent to an external AE is accepted.

## **1.3 Sequencing of Real World Activities**

This model is not applicable to the Sequencing of Real-World Activities.

## **2 AE SPECIFICATION**

### **2.1 Print Service Class SCP Specification**

Printlink 5-IN receives print request associations and operates as an application entity.

Printlink 5-IN conforms as an SCP to the following SOP classes.

Supported SOP Class and UID Value:

SOP Class name	SOP Class UID
Verification SOP Class	1.2.840.10008.1.1
Basic Grayscale Print Management Meta SOP Class	1.2.840.10008.5.1.1.9
Presentation LUT SOP Class	1.2.840.10008.5.1.1.23

### **2.1.1 Association Establishment Policies**

This section describes the conditions for establishing association.

## **2.1.1.1 General**

The following value should be applied to the application text name.

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

Print Management SCU and SCP utilize the DICOM upper layer to establish association. In doing so, Printlink 5-IN (SCP) receives an association started by the Host (SCU). The maximum PDU size used is 64KB.

## **2.1.1.2 Number of Associations**

The number of associations that Printlink 5-IN can support at the same time is 8.

## **2.1.1.3 Asynchronous Nature**

Printlink 5-IN manages asynchronous N-EVENT messages. However, a message is sent whenever necessary.

## **2.1.1.4 Implementation Identification Information**

The Implementation Class UID for Printlink 5-IN is "1.2.392.200036.9107.500.521".

The Implementation Version Name for Printlink 5-IN is "KC\_PLNK5\_X.XXXXX". "X.XXXXX" indicates the software version.

e.g. KC\_PLNK5\_1.00R00

## **2.1.2 Association in Real World Activities**

Printlink 5-IN (SCP) starts associations to publish asynchronous N-EVENT messages.

## **2.1.3 Association Acceptance Policy**

Printlink 5-IN (SCP) establishes associations from the association establishment request from the HOST (SCU).

### **2.1.3.1 Real World Activities**

#### **2.1.3.1.1 Associated Real World Activity**

Image data and various parameters are sent to the imager with the command from the HOST (SCU) in order to print image data on films.

C-ECHO, Film Session, Film Box, and Image BOX can be requested with a command from the HOST (SCU).

**2.1.3.1.2 Presentation Context Table**

### B.1.1 Other restriction on the image data

- A different image size must not exist in one film.

- Number of printable pixels (PP)

Film Size	Film Orientation	Columns	Row
14 x 17	PORTRAIT	8550	10225
	LANDSCAPE	10450	8325
14 x 14	PORTRAIT	8550	8325
	LANDSCAPE		
11 x 14	PORTRAIT	6675	8325
	LANDSCAPE	8550	6450

- The number of maximum input pixels in one frame of each format is obtained with the following calculations.

$$\text{Number of maximum input horizontal pixels} = (\text{PP} - 300 - 50 \times (\text{Nh} - 1)) / \text{Nh}$$

$$\text{Number of maximum input vertical pixels} = (\text{PP} - 525 - 50 \times (\text{Nv} - 1)) / \text{Nv}$$

(PP: Number of print valid pixels / Nh: Number of frames in horizontal direction / Nv: Number of frames in vertical direction)

\* The number of maximum input pixels in the horizontal direction cannot exceed 5120.

e.g. The number of maximum input pixels in one frame for 14 x 17, 3 x 4 (12 frame format), and Portrait is obtained as shown below.

$$\text{Number of maximum input horizontal pixels} = (8550 - 300 - 50 \times (3 - 1)) / 3 = 2716$$

$$\text{Number of maximum input vertical pixels} = (10225 - 525 - 50 \times (4 - 1)) / 4 = 2387$$

- The number of specified input pixels to realize life size at 80µm in a one frame.

### B.2.1.1.3 Method for obtaining the number of valid print pixels

- The number of maximum input pixels in one frame of each format is obtained for each film size and film orientation in the following method.

Printing in Normal Mode (when the image size is not reduced)

$$\text{Number of maximum input horizontal pixels} = \text{PP} - 16 \times (\text{Nh} - 1) / \text{Nh}$$

$$\text{Number of maximum input vertical pixels} = \text{PP} - 16 \times (\text{Nv} - 1) / \text{Nv}$$

Printing in Extension Mode (when the image size is reduced)

$$\text{Number of maximum input horizontal pixels} = \text{PP} - 16 \times (\text{Nh} - 1) / \text{Nh} / 0.8$$

$$\text{Number of maximum input vertical pixels} = \text{PP} - 16 \times (\text{Nv} - 1) / \text{Nv} / 0.8$$

(PP: Number of maximum valid input pixels / Nh: Number of frames in horizontal orientation / Nv: Number of frames in vertical orientation)

e.g. The number of maximum input pixels in one frame for 14 x 17, 3 x 4 (12 frame format), and portrait orientation is obtained in the following method.

Normal Mode

$$\text{- Number of maximum input horizontal pixels} = (4310 - 16 \times (3 - 1)) / 3 = 1426$$

$$\text{- Number of maximum input vertical pixels} = (5160 - 16 \times (4 - 1)) / 4 = 1278$$

Extension Mode

$$\text{- Number of maximum input horizontal pixels} = (4310 - 16 \times (3 - 1)) / 3 / 0.8 = 1782$$

$$\text{- Number of maximum input vertical pixels} = (5160 - 16 \times (4 - 1)) / 4 / 0.8 = 1597$$

### B.2.1.2.3 Method for obtaining the number of valid print pixels

- The number of maximum input pixels in one frame of each format is obtained for each film size and film orientation in the following method.

Printing in Normal Mode (when the image size is not reduced)

$$\text{Number of maximum input horizontal pixels} = \text{PP} - 29 \times (\text{Nh} - 1) / \text{Nh}$$

$$\text{Number of maximum input vertical pixels} = \text{PP} - 29 \times (\text{Nv} - 1) / \text{Nv}$$

Printing in Extension Mode (when the image size is reduced)

$$\text{Number of maximum input horizontal pixels} = \text{PP} - 29 \times (\text{Nh} - 1) / \text{Nh} / 0.9$$

$$\text{Number of maximum input vertical pixels} = \text{PP} - 29 \times (\text{Nv} - 1) / \text{Nv} / 0.9$$

(PP: Number of maximum valid input pixels / Nh: Number of frames in horizontal orientation / Nv: Number of frames in vertical orientation)

e.g. The number of maximum input pixels in one frame for 14 x 17, 3 x 4 (12 frame format), and portrait orientation is obtained in the following method.

Normal Mode

$$\text{- Number of maximum input horizontal pixels} = (8610 - 29 \times (3 - 1)) / 3 = 2850$$

$$\text{- Number of maximum input vertical pixels} = (10310 - 29 \times (4 - 1)) / 4 = 2555$$

Extension Mode

$$\text{- Number of maximum input horizontal pixels} = (8610 - 29 \times (3 - 1)) / 3 / 0.9 = 3167$$

$$\text{- Number of maximum input vertical pixels} = (10310 - 29 \times (4 - 1)) / 4 / 0.9 = 2839$$
