Giving Shape to Ideas

From patient registration to output to film, Konica Minolta provides complete workflow.

I. Digitize

Just insert an exposed cassette into the ImagePilot Sigma CR reader. The ImagePilot then automatically processes the image for optimized diagnostic viewing. ImagePilot Sigma delivers up to 45 plates per hour. (14x17")

II. Print View

The ImagePilot Sigma has Print Compose mode. It adjusts images, layouts, and annotations freely. Since adjustments can be made on the Image Scan screen without needing to switch to another screen, the task can be completed in much shorter time.

III. Print

The DRYPRO Sigma outputs the films up to 45 sheets (14x17") per hour after the image has been printed from ImagePilot DRYPRO. Sigma has four types of films available, which can be transposed based on user needs.

Compact Design

DRYPRO Sigma is a desktop DRY Laser Imager. It features a compact footprint as small as 65x60cm. It is designed to seamlessly integrate into various environments when combined with ImagePilot Sigma.

Four film sizes and easy loading process

Users can use four sizes of films for different purposes. Open the front cover, retrieve the film inside, and load new one. Replacing the film can be done with this simple process.

User-friendly

DRYPRO Sigma is easy to operate, requiring no hands-on training upon installation and offering intuitive usability.

DICOM PRINTER

DRYPRO Sigma can connect easily to other CR and DR consoles, CT, and MRI, in addition to ImagePilot. Non-DICOM images can be imported easily using ImagePilot Sigma and can also be printed using DRYPRO Sigma.
